

<https://wptv.wordpress.com/wp-admin/edit-tags.php?taxonomy=language> is only allowing the possibility to enter a name for the language.

<input type="checkbox"/>	Name	Description
<input type="checkbox"/>	Bahasa Melayu	—
<input type="checkbox"/>	Bulgarian/Български език	—
<input type="checkbox"/>	Chinese	—
<input type="checkbox"/>	Croatian/Hrvatski	—
<input type="checkbox"/>	Czech/Čeština	—
<input type="checkbox"/>	Danish/Dansk	—

A WPTV admin would still create the language, but then a dropdown from <https://translate.wordpress.org/api/languages> could be used to have the language codes. Fields **lang_code_iso_639_1** and **wp_locale** would be useful.

For the link with YouTube, the **lang_code_iso_639_1** is needed as an extra field in the API for the videos on <https://wordpress.tv/api/videos.json> to sync them.

For possible further integration both fields should be visible in <https://wordpress.tv/api/languages.json>
